Okay, thanks. Please copy me on the final cleanup report you send to the TRRC.

Yes sir. We have received RRCT clearance after all confirmation samples came back below limits, have backfilled the S1 Line and demobilized from the site.

I will be sending out the ICS 209 for yesterday shortly. It was late when I arrived home last night so I am working on it now.

Nick:

We had a crew over at the gas station Wednesday night after the station closed spray washing and hand cleaning the awnings and building. We even addressed some cleaning that was obviously not overspray just to be good neighbors. I checked it out and it looks better. We used Simply Green so all products used were environmentally safe.

In regards to the land adjacent we looked at it and it is just light overspray, no saturated soil. We informed him that if we went in there and cut the vegetation it would do more harm than good and after a rain or two it would be in better shape than before. I also had APEX pull soil samples around the property so he could have them if he ever sells the property.

This property is also used as a staging area for the road construction project and there is a lot of equipment that parks on it.

I am letting our Landman, Tim Taylor, handle it now. Please let me know if you need anything else.

Bret

He is supposed to meet with your Landman at 1030 today, but can you make sure his concerns are addressed?
